1. Introduction

Devsinc's data is among its most valuable assets. Information Security deals with the protection of this data against loss, misuse or damage of information processed, stored, transmitted or retrieved from an electronic medium. Information security means protecting information and information systems from unauthorized access, use, disclosure, disruption, modification, or destruction.

This policy document is based on internationally recognized standards, best practices and regulatory guidelines.

Information Security (IS) has become a critical business function and an essential component of governance and management affecting all aspects of the business environment. Effective IS controls are necessary to ensure the confidentiality, integrity, availability, durability and quality of technology resources and associated information/data.

These assets shall be adequately protected from unauthorized access, deliberate misuse or fraudulent modification, insertion, deletion, substitution, suppression or disclosure. To achieve these objectives, Devsinc shall establish an IS program inclusive of control manuals to manage the risks. Management may consider a variety of IS policies, procedures and controls manuals and adopt measures that appropriately address identified risks.

2. Purpose

Devsinc regards information as a highly valuable asset and our information systems are critical to the business, "Devsinc" hereby referred to as Devsinc. The Devsinc aims to protect information assets and effectively manage risks in the environments within which it operates. Protection will be provided by adherence to these Information Security Policies through the cost and risk effective combination of hardware, software and security measures.

All employees (management, end users, support personnel, managers, administrators etc.) and contractual personnel therefore, have a responsibility in protecting the Devsinc information through compliance with established policies, standards, guidelines and procedures.

3. Scope

The scope of this policy document covers a set of directives required to be in place to support the implementation of information security manuals and procedures in accordance with local laws &

regulations, ISO 27001:2022 standard and business requirement to achieve the Devsinc goals for the protection and management of information assets.

4. Objective

The main objective of the information security manual is to:

- Provide a set of rules to protect the Devsinc information in a practical and cost-effective manner.
- Establish a system to preserve confidentiality, integrity and availability of the information by designing a risk management process and give confidence to interested parties that risks are adequately managed.
- Establish safeguards to protect the Devsinc information from theft, abuse, misuse and any form of damage.
- Eliminate or minimize the impact that various security related threats and vulnerabilities might have on the Devsinc.
- Encourage the Devsinc users to maintain an appropriate level of awareness, knowledge and professional skills to allow them minimize the occurrence and severity of information security incidents.
- Support the Devsinc to continue its business operations in the event of a significant information security incident.
- Ensure that information security weaknesses and incidents are identified, recorded and responded to, in a timely manner.
- Continually strengthen and improve the overall capabilities of the information security within the Devsinc.

5. Waiver and Exception Criteria

This Policy is intended to address information security requirements. Requested waivers and exceptions must be formally submitted to the IT Head including justification and benefits attributed to the waiver. The same would be documented and must be approved by the Steering Committee. The waiver / deferrals should only be sought in exceptional situations. When communicating non-compliance with the policy for a specific period of time and at the completion of the period the need for the waiver should be reassessed and re-approved, if necessary. No policy should be

provided for a waiver for more than three consecutive terms. The seriousness of threats we face in an increasingly hostile and open world means that it is imperative and we must collectively comply with the Information Security Policies. Failure of any employee to do so may result in disciplinary action.

6. IS Charter

This IS charter defines the mission and objectives of the Devsinc Information Security program, outlines the scope of the Devsinc's mandate, defines terms, and delineates roles and responsibilities for information security throughout the Devsinc. Information Security policies are aimed at reducing exposure to threats, thereby minimizing risk in order to protect Devsinc information assets policies are goals or mandates used to cultivate standards. The Devsinc security standards define metrics against which results can be measured to determine compliance with the policies and describe objectives for procedures. Devsinc security procedures detail how to implement standards in order to comply with policies. Guidelines are suggested methods, best practices, or clarifications to assist with the implementation of standards. The IS charter and IS function at Devsinc is responsible for the development, implementation and monitoring of the information security framework and associated IS risks (including identification & assessment, monitoring, reporting & appropriate mitigation) with the help of concerned stakeholders to update controls as or when needed. The main objective of the IS function is to have an adequate information security policy prepared, approved and implemented across the Devsinc.

IS function will ensure provision of appropriate information security solutions, through adequate level of risk mitigation strategies in terms of risk avoidance, risk reduction, risk transfer and/ or acceptance of residual risks. Risk Management is a joint & shared responsibility of all the stakeholders within the Devsinc.

All key stakeholders including Business, Operations, IT, IS and Internal Control functions are responsible for a common objective to provide increased protection to the Devsinc and its customers from threats and vulnerabilities emanating through breach of information security.

6.1. Enforcement

Employees, Personnel, contractors and any individual accessing Devsinc information assets, who fail to adhere to this charter, may be subject to explanations and disciplinary action, both within and

outside the Devsinc. Violations will be handled through the Devsinc's disciplinary procedures applicable to the relevant division or employee. The Devsinc may suspend, block or restrict access to its resources, employees, and/or Divisions independent of such procedures, when it reasonably appears in the best interest of the Devsinc to do so. The Devsinc may also refer suspected violations of applicable law to appropriate law enforcement agencies.

6.2. Distribution of Policy and Custodians

Approved policy will be placed in the Devsinc intranet portal and formal intimation will be sent to all employees through Devsinc corporate communication at the time of update.

7. Layout of Information Security Policy

The Devsinc Information Security policy is comprised of the following fourteen sections:

- Review of information security policy and directives
- Organization of information security
- Human Resources Security
- Asset Management
- Access Control
- Cryptography
- Physical & Environmental Security
- Operations Security
- Communications Security
- System acquisition, development and maintenance
- Supplier relationships
- Information Security Incident Management
- Information Security aspects of business continuity management
- Compliance

The structure of the document is aligned with ISO 27001:2022 standard.

7.1. Review of Information Security Policy and Directives

Devsinc's Information Security Function is responsible for administering the Information Security policy, procedures and manuals. This task includes updating the documents from time to time to

reflect updates, amendments, and circumstances requiring change in policies, procedures, manuals and training the personnel. The maintainer of the documents is Information Security function in collaboration with the IT department and relevant stakeholders. All users are required to read, understand and comply with the Information Security policies, procedures and relevant documentation. Information Security of each system will be the responsibility of its custodian.

Approval of IT Head policy, procedures and manuals will follow the following directives.

- **Stage 1:** Defining a general high level security policy with the aim of establishing a general view of the areas that should be assessed and secured. Stage 1 policy must be approved by the steering committee and reviewed at least after three years.
- **Stage 2:** Defining low level and detailed security manuals, standards guidelines and procedures defined for each of Stage 1. Stage 2 documents must be reviewed and approved by the steering committee.

7.2. Organization of Information Security

The directives in this section outline the requirements to establish a management framework to drive the implementation of information security within the Devsinc. Further details of each control are defined in relevant control manual / procedure,

7.2.1. Internal Organization

7.2.1.1. Information security roles and responsibilities

An Information Technology (IT) defined guidelines for the roles and responsibilities pertaining to information security throughout the Devsinc. To ensure that information security is properly implemented, all the Devsinc associates must understand and comply with the responsibilities identified in the document of control manual when their duties entail.

7.2.1.2. Segregation of Duties

- Adequate segregation of duties controls shall be maintained to reduce the risk of intentional or unintentional malicious activities; where segregation of duties is not practical, appropriate compensating controls shall be implemented.

7.2.1.3. Contact with Authorities

- Contacts with relevant authorities are formally maintained to:

- Ensure compliance with applicable laws and regulations,
- Anticipate and prepare for upcoming changes to such laws and regulations.
- Ensure timely reporting and implementation of corrective actions in the event of a security breach.

7.2.1.4. Information Security in Project Management

- Projects executed at the Devsinc involve the information Security Team to perform due diligence to integrate the security requirements.

Projects are reviewed as per the regulatory requirement.

7.2.1.5. Bring Your Own Device (BYOD) Directive

- The decisions for BYOD directive are developed on best practices and available market technological solutions.

The details will be provided in control manual:

7.2.1.6. Teleworking

The Devsinc users shall be allowed to telework if the external location security is compliant with Information Security Policy, Directives, Procedures, Guidelines and Standards, including

- **Communication Security:** The Devsinc users will ensure that hardware and software used to connect to the Devsinc resources are compliant with the Devsinc IS Policy and Directives.
- **Access Control:** The Devsinc users will ensure that access to the Devsinc resources is properly protected at the teleworking site as defined in the control manual

7.3. Human resource security

The directives in this section outline the responsibilities of the Devsinc to ensure its information assets are sufficiently protected against misuse and harm by the Devsinc users and its candidates for employment. In addition, the directives in this section help reducing the risks of human error, theft, fraud or misuse of facilities by ensuring that users are aware of information security threats and concerns, and are adequately equipped to support information security policy in the course of their normal work, Further details of each control are defined in control manual.

7.3.1. Prior to Employment

- New hires will be subject to screening / background professional qualifications and employment background checks prior to employment in accordance with relevant laws and regulations.
- All employees will sign the terms and conditions of their employment, the Acceptable Usage Directives (in appendix 9.1), and also the Non-Disclosure Agreement, where applicable prior to being permitted access to the Devsinc information assets. A record of every user's acceptance shall be maintained.

7.3.2. During Employment

7.3.2.1. Management responsibilities

- Management will ensure that the Devsinc users are properly briefed on their information security roles and responsibilities prior to being granted access to confidential information or information systems.
- Management will establish an anonymous reporting channel to report information security violations as defined in the control manual.

7.4. Information Security awareness, education and training

- The Devsinc existing and new joiner staff shall undergo security awareness training as defined in information security control manual and plan, on the Devsinc information security policy and related documentation, responsibilities and expectations.
- Changes to information security policy or related documentation shall be communicated through formal communication channels in a timely manner.

7.4.1. Disciplinary process

Disciplinary actions will be taken against the Devsinc users in the event of violation of the Devsinc Information Security Policy and related documentation, according to applicable regulatory requirements and in coordination and compliance with the HR disciplinary actions within HR Policies.

7.4.2. Termination and Change of Employment

if a user resign, be terminated or transferred internally, HR will notify the IT / IS department about the appropriate details to ensure timely and appropriate removal or update of the user's physical

access and logical access to the Devsinc information assets in accordance with a formal Employee Change Request (Transfer) Procedure or an Employee Exit Procedure.

7.5. Asset Management

The directives in this section ensure that all the Devsinc information assets are protected in an appropriate manner against misuse and harm, and are safeguarded against the risks associated with security breaches impacting the Confidentiality, Integrity and Availability of the information assets. Further details of each control are defined in the control manual.

7.5.1. Responsibility for Assets

7.5.1.1. Inventory of assets

All information assets, will be recorded in a detailed asset inventory, and reviewed on a regular basis as defined in the control manual.

7.5.1.2. Ownership of assets

- All information assets listed in the asset inventory shall be assigned an Asset Owner. However, asset owners are generally head of departments, sections or groups whose work is most affected by the assets required to provide their services, and are perceived by the entity as the ultimate decision makers when it comes to the management of these assets.
- Asset Custodian shall be responsible to update identified appropriate controls suggested by IT to ensure that all information assets are sufficiently protected against misuse.

7.5.1.3. Acceptable use of assets

Acceptable use of information and information assets will be covered as below and defined (in appendix 9.1):

- Information Systems and Services Usage
- Information Usage
- E-mail Usage
- Portal Usage
- Internet Usage
- Remote Access
- Password Usage
- Printer Usage

- Physical Security
- Unacceptable use
- Compliance and Monitoring
- Disclaimer
- Enforcement
- Reporting Acceptable Usage Violations

7.5.1.4. Return of assets

All users will return all of the organizational assets in their possession upon resignation, termination or transfer.

7.5.2. Information Classification

7.5.2.1. Classification of Information

- Controls to manage Information Asset Management will be defined and implemented to effectively support the business requirements.
- All information assets identified in the asset inventory will be classified according to the classification scheme.
- The default classification for all information assets will be 'Confidential Information' until a specific classification has been assigned.
- Information asset classification will be reviewed as defined in control manual Labeling and Handling of Information Assets
- All information assets will be labeled in accordance with the classification scheme and naming convention shall be defined.
- Information assets shall be protected and managed in accordance as per the classification scheme defined in the control manual.
- The identified controls shall be implemented and enforced to ensure adequate prevention and detection of information leakage.

7.5.3. Media Handling

7.5.3.1. Management of Removable Media

When in use, storage or transit, removable media and USB shall be physically and logically protected and block against loss, damage, abuse or misuse. However, to safeguard Devsinc data removable

media and USB are blocked in the required domains and exceptions will be applied after required approval defined in control manuals and procedures.

7.5.3.2. Disposal of Media

Disposal of media and the information stored on it shall be performed securely, according to the "IT Equipment and information disposal policy" and regulatory requirements.

7.5.3.3. Physical Media Transfer

Media containing sensitive information shall be protected against unauthorized access, misuse or corruption during transportation.

7.6. Access Control

The directives in this section ensure that only authorized personnel are granted access to the Devsinc information and information processing facilities (including operating system, network components and applications). This helps ensure the protection of information from unauthorized access, malicious intent, compromise & theft and preserve the confidentiality, integrity and availability of the Devsinc information and information processing facilities. Further details of each control are defined in the relevant control manual.

7.6.1. Business requirements of access control

7.6.1.1. Access Control Directive

- Access controls shall be designed to protect the Devsinc information assets by relevant sections or groups.
- Access rights shall be defined on a minimum level of access in accordance with the job description, roles and responsibilities of the user.
- Administrative access rights shall not be given to any user unless it is highly required by the business and the request for which shall be assessed by the IT and approved by HOD-IT.
- Access to the Devsinc information and information assets shall be authorized and approved with valid business justification and shall be reviewed defined in the control manual. ' -
- Authentication mechanisms shall be implemented in accordance with the service criticality, evaluated according to Controls Manual.
- Default vendor authentication credentials shall be changed following the installation of the systems or approved software.

7.6.1.2. Access to Networks and Network Services

- Access to networks and network services shall be granted after approval by the IT, based on business needs and after evaluating any security risks & their impact on the Devsinc, according to the control manual and procedure
- Adequate tools shall be installed by IT to protect and monitor the access to the network infrastructure and network services to facilitate the ISO.

7.6.2. User access management

7.6.2.1. User Registration and De-Registration

- The control manual and procedure shall be defined to perform the creation of user IDs (user registration) and the cancellation of user IDs (de-registration).
- A unique user ID shall be created for each user and shall link the user to their information systems activities.
- User IDs must conform to naming conventions defined in the control manual and must not give any indication of the users' access rights.

7.6.2.2. User Access Provisioning

- The assignment of user access rights to an application (provisioning) shall be defined and implemented according to the controls manual.
- Third parties and contractor's access shall be provided on a temporary basis depending on business need and shall be monitored and logged.

7.6.2.3. Management of Access Rights

Privileged access rights shall be assigned to a user profile different from those used for regular business activities. Regular business activities shall not be performed from privileged user profile.

7.6.2.4. Management of Secret Authentication Information of Users

- The secret authentication information (password, or other authentication mechanism) shall be given to users in a secure manner, according to the controls manual.
- An expiry date shall be defined for secret authentication information.

7.6.2.5. Review of User Access Rights

- IT and Asset Owner shall formally review the user access rights on a regular basis (at least annually) in accordance with the service criticality.

- Review of access rights shall be documented and records shall be maintained.
- In the event of discrepancies identified during the access rights review, timely revocation of access rights shall be executed in accordance with the controls manual.

7.6.2.6. Removal or Adjustment of Access Rights

- Timely revocation or deactivation of user profile shall be executed upon user resignation, termination or security breach identification.
- The required approvals defined in the control manual shall be obtained prior to adjusting the access rights.

7.6.3. User Responsibilities

7.6.3.1. Use of secret authentication information

- Users shall acknowledge receipt of secret authentication information and keep the personal secret authentication information confidential.
- Users shall be timely requested to change their authentication information whenever there is any indication of its possible compromise.

7.6.4. System and application access control

7.6.4.1. Information Access Restriction

- Applications shall have the functionalities to control the access rights of users.

7.6.4.2. Secure Log-on Procedures

- Multifactor authentication mechanisms for MFA specific domains shall be considered in accordance with the service criticality as per defined in the control manual.
- The log-on process shall not disclose information that provides a malicious user the capability to realize the correct credentials, shall not transmit passwords in cleartext and shall log successful and unsuccessful access attempts.
- The log-on process shall block the access activity following a pre-defined number of unsuccessful attempts. Reactivating the access activity shall not be automatically configured and shall only be allowed after appropriate investigation in accordance with the controls manual.

7.6.4.3. Password Management System

- The applications/systems/devices shall be enabled to enforce a strong password policy to ensure quality passwords in accordance with the control manual.

7.6.4.4. Use of Privileged Utility Programs

- The installation or use of utility programs (that might be capable of overriding system and application controls) shall be limited to a specific timeframe, justified and approved by the IT head.
- Access to system utilities shall be granted only to authorize personnel to carry out administrative or business required activities.
- System utilities activities shall be logged and reviewed on a regular basis, at least annually.

7.6.4.5. Access Control to Program Source Code

- Program source code, if available and associated information such as designs, specifications, program listings, test plans and reports shall be maintained in a controlled manner.

7.7. Cryptography

- The directives in this section outline the controls that shall be designed to ensure appropriate and effective use of cryptographic controls to protect the confidentiality, authenticity and / or integrity of information. Further details of each control are defined in the control manual.

7.7.1. Cryptographic controls

7.7.1.1. Directives on the Use of Cryptographic Controls

- Cryptographic controls shall be designed to protect the Devsinc information assets when stored or in transit.
- Devsinc shall use a masking model for the information in use as per regulatory guidelines and best practices.

7.7.1.2. Key Management

- Key management controls shall be designed to maintain the confidentiality, integrity and availability of cryptographic keys throughout the keys' lifecycle including generating, storing, using, retrieving, distributing, backing-up and destroying keys.

7.8. Physical and Environmental Security

- The directives in this section outline the physical and environmental security controls that shall be established and maintained to protect the Devsinc information processing facilities, systems, devices and records from unauthorized physical access, interference and damage to equipment. Further details of each control are defined in the control manual.

7.8.1. Secure Areas

7.8.1.1. Physical Security Perimeter

- Physical security perimeter controls shall be identified and implemented in accordance with the criticality of the services in such a way that does not divulge the type or nature of the services being operated within the Devsinc primary, secondary and business continuity location.

7.8.1.2. Physical Entry Controls

- Physical entry controls shall be designed and installed at the internal and external reception areas. Appropriate technology shall also be installed at entrances in accordance with the services' criticality.
- Visitors shall be authenticated and escorted within the Devsinc premises.
- Users shall be provided with an identification badge that clearly discloses the purpose of their presence on the Devsinc premises.

7.8.1.3. Securing Offices, Rooms and Facilities

- Security controls shall be identified and implemented in accordance with the criticality of the services operated within the Devsinc offices or meeting rooms without divulging the type or nature of the information being processed in these areas.

7.8.1.4. Protecting against External and Environmental Threats

- Adequate controls such as fire proof cabinets, fire extinguishers, HVAC (Heating, Ventilation and Air Conditioning) controls, shall be identified and implemented to protect the Devsinc information assets from natural or man-made disasters.
- Identified controls shall consider not only the protection of information assets but also the recovery of these assets in the event of failure in protecting them.

7.8.1.5. Working in Secure Areas

- Secure areas shall be identified and protected by designing and implementing adequate security controls. The controls shall be designed in such a way that does not divulge the type or nature of the services being operated within that area.

7.8.1.6. Delivery and Loading Areas

- Delivery and loading areas shall be isolated from the Devsinc information processing environment and shall be adequately monitored.
- Adequate access controls shall be implemented to ensure access to only authorized personnel in accordance with the control manual.

7.8.2. Information Processing Equipment

7.8.2.1. Equipment Siting and Protection

- Equipment should be sited and protected to reduce the risks of environmental threats, hazards, and opportunities for unauthorized access, in accordance with the service criticality.
- Equipment siting controls shall cover health, safety and security controls inherited from the physical and environmental controls procedures, standards, guidelines, baselines and I or benchmarks.

7.8.2.2. Supporting Utilities

- Supporting utilities controls shall be designed and maintained in accordance with the supplier specifications and the services criticality.
- Supporting utilities controls shall alarm relevant parties in the event of failure or performance degradation.

7.8.2.3. Cabling Security

- Power and telecommunication cables shall be physically secured to prevent intentional or unintentional failure and follow the best suitable cabling standards.

7.8.2.4. Equipment Maintenance

- Equipment shall be maintained in accordance with the supplier's recommended intervals, specifications to keep in a good working condition.
- Equipment maintenance shall be performed by authorized personnel and contractors.

- Equipment maintenance activities shall be monitored and controlled by asset custodian and reported to the IT.
- Timely equipment warranty renewal needs to ensure all critical information assets.

7.8.2.5. Software Maintenance

- Software maintenance relating to update and upgrade solutions recommended timely to be executed to avoid indicators of compromise and vulnerabilities.
- Software maintenance activities shall be monitored and controlled by asset custodians.
- The requirement of reporting of these maintenance will be defined in the control manual.
- Timely software warranty renewal needs to be ensured for all critical application assets.

7.8.2.6. Removal of Assets

- Equipment requiring off-site maintenance shall not be moved or taken off-site unless appropriate approvals are obtained and business impacts are considered and accepted as defined in the control manual.

7.8.2.7. Security of Equipment Off-Premises

The off-premises use of information assets shall be authorized by the Asset Owner.

7.8.2.8. Secure Disposal or Re-Use of Equipment

As defined in the control manual:

- Information assets shall be sanitized prior to re-use.
- Asset owners' approval shall be obtained prior to re-using or destroying an information asset.

7.8.2.9. Unattended User Equipment

- Adequate physical and technical controls shall be designed and implemented to protect unattended information assets.

7.8.2.10. Clear Desk and Clear Screen Directives

- Clear desk and clear screen controls shall be designed and implemented according to the “Acceptable Usage Directives” (in appendix 9.1), to protect the Devsinc information assets, including the need to lock when not required any information asset classified as “internal use” or higher, and log-off computer and terminals when not in use.

7.9. Operations security

- The directives in this section establish the necessary requirements to enable secure operations within the information processing environment. Further details of each control are defined in the control manual.

7.9.1. Operational procedures and responsibilities

7.9.1.1. Documented Operating Procedures

- Operating procedures shall be approved and communicated to relevant parties, and shall be reviewed on a regular basis or whenever a major change has been introduced to the information processing environment.
- IT Operating Procedures outsourced to third-parties shall be documented by the contractor and communicated to the relevant parties within the Devsinc.

7.9.1.2. Change Management

- Changes in the information processing environment shall only be executed in accordance with the control manual.

7.9.1.3. Capacity Management

- Capacity analysis shall be performed for all IT systems based on the service criticality on a regular basis or whenever a major change is being planned. Projected capacity and available budget shall be analyzed and resources shall be tuned timely to avoid degradation of service or business disruption.

7.9.1.4. Separation of Development, Test, UAT, SIT, VAPT and Production Facilities

- The production environment from one side and the development, test, UAT, SIT and VAPT environment from the other side shall be logically segregated.
- Testers and developers shall be granted limited access to the development and test environments in accordance with the control manual.

7.9.2. Protection from Malware

7.9.2.1. Controls against Malware

- Antivirus solution shall be deployed on all applicable IT platforms and shall be configured for optimum protection and automatic updates.

- End users using corporate devices (including Administrators) shall not be allowed to disable the corporate antivirus, and technical controls to prevent this action shall be implemented.
- End users are responsible to inform IT / IS if they found an outdated antivirus database or not having a corporate antivirus solution on Devsinc provided equipment.

7.9.3. Backup

7.9.3.1. Information Backup

- Backups shall be performed according to the Access control Policy and procedures, in order to ensure that the right backup, verification, testing, storage, retention and disposal processes are performed and to ensure that physical and logical security of the backup media is maintained.
- Backup solution shall be installed and scheduled in accordance with a pre-defined backup schedule in accordance with the service criticality.
- Backup testing shall also be planned to verify backup authenticity and integrity, all results should be documented.

7.9.4. Logging and Monitoring

7.9.4.1. Event Logging

- Event logging settings shall be defined and implemented in accordance with the service criticality and correlation requirement of likelihood.
- Event logs monitoring shall be conducted as defined in accordance with the service criticality as defined in the control manual.

7.9.4.2. Protection of Log Information

- Event logs shall be securely recorded, maintained and retained as per business and regulatory requirement.

7.9.4.3. Administrator and Operator Logs

- Administrators' activities shall be comprehensively logged and reviewed as defined in the control manual.
- Third parties and contractors' administrative activities shall be monitored continually and reported regularly.

7.9.4.4. Clock Synchronization

- Clocks of all relevant information processing systems shall be synchronized with an agreed reference (such as Coordinated Universal Time, UTC) using the appropriate tools (like the Network Time Protocol server).

7.9.5. Control of Operational Software

7.9.5.1. Installation of Software on Operational Systems

- Installation of software on operational systems shall be based on business requirements in accordance with the control manuals and procedures.

7.9.6. Technical Vulnerability Management

7.9.6.1. Management of Technical Vulnerabilities

- Technical vulnerability assessment programs shall be defined and implemented as per service criticality.
- Patches shall be timely installed automatically on systems on off days.

7.9.6.2. Restrictions on software installation

- Installation of software not approved and documented in the “Authorized Software List1' shall not be allowed.
- Unlicensed and outdated software is being restricted.
- End users using corporate devices shall have limited privileges to restrict them from installing software or utility programs.

7.10. Information Systems Audit Considerations

7.10.1. Information Systems Audit Controls

- The Devsinc shall plan, manage and monitor rapidly changing technologies to enable them to deliver and support new products, services and delivery channels. These changes and the increasing reliance on technology make IT audit coverage essential to an effective overall audit program aligned with regulatory requirements and implemented in accordance with the service criticality.

7.11. Communications Security

- The directives in this section establish the necessary requirements to enable secure flow of the Devsinc information inside and outside the Devsinc network and its supporting information processing facilities. Further details of each control are defined in the control manual.

7.11.1. Network Security Management

7.11.1.1. Network Controls

- Network controls shall be defined and inherited, in accordance with the highest service criticality deployed on the infrastructure.

7.11.1.2. Security of Network Services

- Security controls over the network providers shall be defined and incorporated into the relevant agreement. These controls shall cover but not be limited to: service levels, security features and the right to audit.

7.11.1.3. Segregation in Networks

- The Devsinc network infrastructure shall be designed to segregate different groups of information services.

7.11.2. Information Transfer

7.11.2.1. Information Transfer Directives and Procedures

- Information handling controls to protect transferred information, shall be defined in accordance with the service criticality.

7.11.2.2. Agreements on Information Transfer or Sharing

- Information transfer or sharing agreements shall be defined between the Devsinc and any external party, to implement the adequate controls to protect the information in motion, in use or at rest.

7.11.2.3. Electronic Messaging

- Information exchanged through email, electronic data interchange and social networking shall be protected from unauthorized access.

7.11.2.4. Social Media Directive

- Personal email address shall be used to register on social networks, blogs or other online tools utilized for personal use. Company specific social media profiles shall not be created by users without prior authorization.
- Content involving the Devsinc users, customers, business partners or any other subjects related to the Devsinc shall not be published on social media unless authorized by the IS department.
- Users shall publish content on social media only on their own behalf and shall refrain from speaking on behalf of the Devsinc without prior authorization.
- Personal social media use shall not interfere with normal business activities, involve solicitations, be associated with any for-profit outside business activity or potentially embarrass the company and damage its reputation or image.
- The Devsinc reserves the right to monitor how the Devsinc owned information assets, including computers, laptops and networking equipment are used and users shall be mindful that any web browsing they do on the Devsinc premises may be monitored.

7.11.2.5. Wireless Directive

- Guests shall be allowed the Devsinc Guest Wireless Access only on acceptance of the Devsinc terms & conditions.
- Access to the Devsinc wireless service shall be restricted to the Devsinc staff and authorized users.
- The installation of personal wireless networking equipment or rogue wireless access points in the Devsinc owned or leased spaces shall not be allowed.
- The Devsinc users shall not be allowed to set up any form of proxy service or similar arrangements to enable more than one computer to access the network via a wireless connection.

7.11.2.6. Confidentiality or Non-Disclosure Agreements

- Confidentiality and non-disclosure agreements shall be signed by all parties involved in transmission of the Devsinc information.

7.12. System Acquisition, Development and Maintenance

- The objective of the directives in this section is to ensure that information security is embedded in the information system lifecycle. Further details of each control are defined in the relevant control manual.

7.12.1. Security Requirements of Information Systems

7.12.2.1. Information Security Requirements Analysis and Specification

- Information security requirements shall be identified and outlined during the request for proposal and in the design phase or other related phases of a new information system.
- In the event of inability to incorporate the security requirements, the new or enhanced information system shall be deployed on an isolated domain.

7.12.2. IT Solution Acquisition Directive

7.12.2.2. Securing Application Services on Public Networks

- The Devsinc information passing over public networks or third-party domains shall be protected formally by an agreement between the Devsinc and external authorized signatories to ensure that information in use and at rest is protected in accordance with the Devsinc information security requirements.

7.12.3. Security in development and support processes

7.12.2.3. Secure Development Directive

- Secure development or compensating controls shall be designed to protect the development lifecycle of a new service.

7.12.2.4. System Change Control Procedures

- A System Development Life Cycle control manual and procedure shall be defined to ensure the integrity of the information system and the compliance with the pre-defined security requirements.

7.12.2.5. Technical Review of Applications after Operating Platform Changes

- Technical security assessment of the applications shall be undertaken whenever operating platforms are changed. Operating Platform may be hardware, operating system, databases or

associated application programming interfaces. The applications shall be tested prior to implementation to ensure that there is no adverse impact on security.

7.12.2.6. Secure System Engineering Principles

- Secure information system engineering procedures based on security engineering principles shall be documented, approved and applied to development activities according to the control manual.

7.12.2.7. Secure Development Environment

- The development environments shall implement appropriate security controls according to the criticality of information being processed, stored and transmitted.

7.12.2.8. Outsourced Development

- Outsourced software development controls shall be defined, supervised and audited on a regular basis (at least annually), in alignment with the control manual.
- These requirements will not be applicable to development being done by an authorized vendor or principal software provider.

7.12.2.9. System Security Testing

- Testing of security controls validation shall be conducted in accordance with the control manual.

7.12.2.10. System Acceptance Testing

- Acceptance testing criteria and tools for new information systems, or enhancement to existing systems shall be defined and approved.

7.12.2.11. Protection of Test Data

7.12. Supplier relationships

- The objective of the directives in this section is to protect the Devsinc information assets accessible by third-parties. Further details of each control are defined in the control manual.

7.13.1. Information Security in Supplier Relationships

7.12.2.12. Information Security Directive for Supplier Relationships

- Suppliers shall comply with the Devsinc Information Security Directive and related documentation.

7.12.2.13. Addressing Security within Supplier Agreements

- Third party related information security risks shall be identified and documented. Subsequently, security mandates to address these risks shall be identified and incorporated in the relevant agreement.
- Third-party information security mandates shall be included in the RFP (Request for Proposal) and RFQ (Request for Quotation). Third-parties shall be required to acknowledge their understanding and commitment to the information security mandates in the response to RFPs or RFQs.

7.12.2.14. Information and Communication Technology Supply Chain

- Third party agreements shall clearly include the information security mandates associated with information technology security risks in the whole Information and Communication Technology supply chain.

7.13.2. Supplier service delivery management

7.12.2.15. Monitoring and Review of Supplier Services

- Services and products delivered by the third party shall be monitored and evaluated to ensure they are delivered in accordance with the information security mandates articulated in the agreement. Frequency of the monitoring shall be appropriate to the contract duration and type of service, but should be conducted on a regular basis, at least annually.
- Third party agreements shall only be rewarded if its information security capabilities are compliant with the Devsinc requirements. The agreement with a third-party supplier shall be terminated if there are repeated violations of agreed information security mandates.

7.12.2.16. Managing Changes to Supplier Services

- Information security mandates stipulated in the agreements shall be reviewed and updated if required, whenever a change in the scope of work has been agreed on.

7.14. Information Security Incident Management

- Information security incident management directives are required to ensure information security events and weaknesses associated with information systems are managed in a timely manner. Further details of each control are defined in the control manual.

7.14.1. Management of Information Security Incidents and Improvements

- Information security events shall be classified and investigated.
- The response to information security incidents shall only be done according to the control manual.
- The incident management report, outcome of the Information Security shall produce lessons learnt and corrective actions to minimize the impact of future incidents, should it occur.
- Reporting channels, layers and escalation mechanisms (including the notification to regulatory body authority, if needed) shall be defined and implemented according to the control manual and procedures.
- The Devsinc users shall report IS events / weakness as soon as possible to the IT Group by using appropriate channels.

7.14.2. Collection of Evidence

- Evidence collection shall be done according to the control manual / procedures and designed to enable effective information security incident investigation and forensics activities.

7.15. Information Security Aspects of Business Continuity Management

- The directives in this section define the organizational direction regarding embedding information security continuity within the Devsinc business continuity management system. Further details of each control are defined in the control manual.

7.15.1. Information Security Continuity

7.12.2.17. Planning Information Security Continuity

- Information security continuity shall be defined, documented and approved within the Devsinc Business Continuity Framework.

7.12.2.18. Implementing Information Security Continuity

- Implementation of the information security continuity shall be documented and maintained as per the Devsinc Business Continuity Framework and control manual.

7.12.2.19. Verify, Review and Evaluate Information Security Continuity

- Information security continuity requirements shall be tested on a regular basis according to the Devsinc Business Continuity Framework and control manual.

7.15.2. Redundancies

7.15.2.1. Availability of Information Processing Facilities

- Information processing facilities shall be sufficient to meet availability requirements and implemented with redundancy as identified in the Devsinc Business Continuity Framework and control manual.

7.16. Compliance

- The directives in this section define the organizational direction to avoid breaches of legal, statutory, regulatory or contractual obligations related to information security requirements. Further details of each control are defined in the control manual.

7.16.1. Compliance with legal and contractual requirements

7.16.1.1. Identification of Applicable Legislation and Contractual Requirements

- All relevant legislative statutory, regulatory, contractual requirements and the organization's approach to meet these requirements shall be identified, documented and kept up to date in a legal register.

7.16.1.2. Intellectual Property Rights and Software License Management

- The Devsinc User shall not violate Intellectual Property rights.
- Information stored on the Devsinc Assets shall remain the property of the Devsinc and all the Devsinc users are bound by the information security policy.
- If a work is copyrighted, explicit written permission to reproduce the work shall be taken from the copyright holder. Copyrighted works include but not limited to: text (e.g. articles), images (e g. photographs), graphics (e.g. logos), sound recordings (e.g. MP3), video recordings (e.g. movies) or software programs. The following materials are not considered copyrighted materials: ideas, facts, process, methods, systems, government works and works in the public domain.
- The Devsinc Users & Service Providers shall report all the instances of actual or suspected copyright infringement to the Devsinc IT department.
- The Office of IP and Technology transfer in the Devsinc shall respond to all appropriate notices of copyright infringement and violations. Software on systems shall be installed or renewed only if a valid proof of license is available.

7.16.1.3. Protection of Records

- Protection of records controls shall be defined and implemented in accordance with the regulatory requirements and control manual.

7.16.1.4. Privacy and Protection of Personally Identifiable Information

- Data privacy and protection of personally identifiable information controls shall be implemented in accordance with the applicable regulatory requirements defined in the control manual.

7.16.1.5. Regulation of Cryptographic Controls

- Cryptographic controls shall be implemented in accordance with the applicable regulatory requirements and as per “Cryptography Standard".

7.16.2. Information security reviews

7.16.2.1. Independent Review of Information Security

- The Devsinc Information Security and its implementation (policies, procedure, and controls) shall be managed and reviewed independently at planned intervals, or when significant changes occur, audited by an independent party.
- The result of independent review shall be recorded and reported to the management, and this record shall be maintained.

7.16.2.2. Compliance with Security Policy Manual and Standards

- IT shall be responsible for monitoring the compliance against the information security policy, manual, procedures, and related documentation.

7.16.2.3. Technical Compliance Review

- Information systems shall be periodically, at least annually, reviewed for compliance with the Devsinc information security policy, manual, procedures and standards.
- Operational systems shall be examined to ensure that hardware and software controls are correctly implemented. Penetration testing and vulnerability assessments shall be carried out for detecting vulnerabilities and evaluating control effectiveness in preventing unauthorized access and fulfilling the regulatory requirement.

8. Terms and abbreviations

The following terms and definitions apply to this manual:

- Administrator; member of the Devsinc IT or of the service provider having user profile with privileged access rights to IT systems / applications / network devices to ensure the upkeep, configuration, and reliable operation of the Devsinc IT Systems.
- Asset: IT asset is any Devsinc owned information, system or hardware that is used in the course of business activities.
- Information Security Event: an information security event is an identified occurrence of a system, service or network state indicating a possible breach of information security policy or failure of safeguards, or a previously unknown situation that may be security relevant.
- Information Security Incident: an information security incident is indicated by a single or a series of unwanted or unexpected information security events that have a significant probability of compromising business operations and threatening information security. Examples of information security events and incidents are:
    - Loss of service, equipment or facilities
    - System malfunctions or overloads
    - Human errors
    - Non-compliances with policies or guidelines
    - Breaches of physical security arrangements
    - Uncontrolled system changes
    - Malfunctions of software or hardware
    - Access Violations
- Information Security Management System (ISMS): set of directives, policy and processes established by management to assess the security requirements, develop and Implement controls, evaluate effectiveness of controls and implement improvements following a Plan-Do-Check-Act continual improvement process.
- IT is owner of the information security management system ISMS and responsible for coordinating all information security activities across the organization along with the ISMS Coordinators.
- Information Security: preservation of confidentiality, integrity and availability of information.
- Integrity: property of accuracy and completeness.

- Interested Party / Stakeholder: person or organization that can affect, be affected by, or perceive themselves to be affected by a security decision or activity.
- Monitoring: determining the status of a system, a process or an activity.
- Directive: A mandatory requirement which is binding on all users of the Devsinc Information or Information assets.
- Policy: intentions and direction of the Devsinc as formally expressed by its Top Management.
- Procedure: specified way to carry out an activity or process.
- Process: set of interrelated or interacting activities which transforms inputs into outputs.
- Production Environment: is where the developed and tested application / system is deployed and available for business use.
- The Devsinc End Users: are users with access to the Devsinc information and information processing environment categorized into the following user groups:
  - Staff
  - Third Party Contractors
  - Vendors
  - Guests
- Risk Assessment: overall process of risk identification, risk analysis and risk evaluation.
- Risk: effect of uncertainty on objectives.
- Service Criticality: the impact of the service determined by the asset owner, evaluated against confidentiality, availability and integrity.
- Service: is a portfolio (or set) of a function that allows an entity to carry out a task (or sets of tasks) that enables benefit to individuals, business or other entities of the Devsinc.
- Teleworking: teleworking refers to all forms of work outside of the office, including non-traditional work environments, such as those referred to as "telecommuting", "flexible workplace', "and remote work" and "virtual work" environments.
- Test Environment: is where the developed source code is tested for defects, development of new systems and against the design requirements before being deployed to the production environment. Quality assurance and quality control of the developed system / application is performed in the test environment to closely simulate the production environment.
- Threat: potential cause of an unwanted incident, which may result in harm to a system or organization.

- Vulnerability: weakness of an asset or control that can be exploited by one or more threats.
- The following abbreviations apply to this policy:
  - BYOD: Bring Your Own Device.
  - HVAC: Heating, Ventilation, and Air Conditioning.
  - IS: Information Security.
  - NDA: Non-Disclosure Agreement.
  - The Devsinc: Devsinc, the organization
  - RFP: Request for Proposal.
  - RFQ: Request for Quotation.

9. Appendices

9.1. Acceptable Usage Directives

- The purpose of these directives is to outline the acceptable use of information systems and services provided by Devsinc to its users.
- The Devsinc users must acknowledge and sign these Acceptable Usage Directives before gaining access to the Devsinc information systems and / or services.

9.2. Information Systems and Services Usage

- Users shall take due care to protect the Devsinc information systems and resources from unauthorized access, tampering and / or accidental damage.
- The Devsinc information systems including desktops, laptops, mobile devices, printers, photocopiers, as well as networks, servers and applications shall be provided for business purposes only, to assist users in carrying out their official duties.
- Each user of the Devsinc shall be allocated a limited server usage space for their business-related data. The data / information contained within such user folders are under the custody of the respective users.
- Users shall not store unauthorized content in such folders.
- Information created on the Devsinc information systems shall remain the property of the Devsinc.

- Responsibility for backing up the data on users' local desktop computers or laptops solely rests with the individual users. Users are strongly encouraged to save their critical data to the appropriate G-Drive so that this data can be backed up regularly.
- If the Devsinc-owned computer equipment is damaged, lost or stolen, the respective user shall be responsible for immediately notifying their manager, IT Help Desk and Information technology Office.
- Users shall not use the Devsinc systems or networks to access unauthorized systems, networks and / or services.
- Users shall not install any software or applications which are not included within the Devsinc Authorized Software List, into desktops or laptops given by the Devsinc for business purposes.
- Users with administrative rights shall not disable or by-pass any controls, such as anti-virus software, proxy servers and / or firewalls, implemented to protect the Devsinc network and / or information assets.
- Such by-pass shall be considered as an information security violation and may lead to disciplinary actions according to Human Resources policies and procedures.
- Users shall log on to information systems by providing a valid username and password. At the end of the working session, users shall log off the information system. If a system is left unattended, it should be locked to prevent unauthorized access and use.
- Personal devices accessing the Devsinc resources shall comply with the "BYOD (Bring Your Own Device) Directive" included in the Devsinc information Security Manual For security, administration, and compliance purposes, authorized individuals within the Devsinc may monitor information systems, system usage logs and the data stored on those systems at any time.

9.3. Information Usage

- Users shall not disclose, communicate or discuss in public any of the Devsinc information. Users shall not post any Devsinc related sensitive or confidential information on public accessible Internet sites, such as social networks, mailing lists or public newsgroups, without obtaining appropriate authorized approval.
- Users shall use, handle and treat all information in accordance with the information asset management manual / procedure.

- Users shall be responsible for the security of any corporate information stored on portable media in their possession. Users shall report the loss of such portable media (containing corporate data) immediately to the IT Help Desk and IT Office.
- Users shall not transmit sensitive or confidential information over the network, without adequate protection controls (encryption, strong passwords etc.). If a user needs assistance in communicating sensitive or confidential information, he or she should contact the IT Office.
- Users shall obtain appropriate intellectual property rights/ copyright or contractual clearances before using any proprietary material. Using or providing the Devsinc developed software, innovative ideas, designs or repositories (software or otherwise) outside the Devsinc environment is prohibited.
- Users need to appropriately protect when not required any information asset classified as "internal use" or higher.
- Users shall remove from the desk any documents classified as "Internal Use" or higher and lock them in a drawer or file cabinet when the workstation is unattended. Keys used to access these documents shall not be left at an unattended work area.

9.4. E-mail Usage

- Users allowed to access their email account from their personal devices shall comply with the "BYOD (Bring Your Own Device) Directive" included in the Devsinc Information Security Manual.
- Email users are responsible for mailbox management, including organization and cleaning.
- Users shall not use the Devsinc provided email facilities to distribute material that typically qualifies as unsolicited email, chain emails or scamming.
- Use of personal and/or external email services for business messaging is prohibited.
- Users are not permitted to use any other user's email account without his/ her approval.
- Emails containing confidential or sensitive content must be protected in-line with the related manual / procedure, in electronic form, when printed onto paper or saved onto another media.
- Users shall not open, execute or store emails and/or attachments received from unknown or untrusted sources as they may contain viruses, email bombs, malicious codes etc. Users shall report the presence of such emails or attachments to the IT Office.

- Users shall not provide their Devsinc email address to mailing lists, blogs, forums or subscribing to internet sites that are not related to Devsinc, unless required for business purposes.
- Users shall add the organization's standard email signature templates in all e-mail communications.
- The contents of an individual's email inbox/outbox shall not be stored by the individual after the term of their employment has ceased and shall be stored by the Devsinc as per the retention policy.

9.5. Portal Usage

- Portal access may be granted to third party non-employees on a case-by-case basis with appropriate approval by the IT. Such access shall always be based on their need-to-access and the least privileges required to perform their duties.
- The following uses of the Devsinc portal is prohibited:
  - To upload, download, or distribute pornographic or sexually explicit material;
  - Violate any applicable law or regulation;
  - To invade or abuse the privacy of others;
  - Violate copyright or use intellectual material without permission;
  - To use the portal for financial or commercial gain; and
  - To degrade or disrupt the Devsinc networks' and systems' performance.
  - Users shall not use the Devsinc portal functionalities to deliberately propagate any Virus, Worm, Trojan horse, or trap door program code.
  - Users are not permitted to use any other user's portal account.
  - Documents containing confidential or sensitive content must be protected in-line with the manual and procedure, in electronic form, when printed onto paper or saved onto another media.
  - Users shall not store documents received from unknown or untrusted sources, and shall report the presence of such documents to the IT.
  - Portal access shall be terminated when the employee or third party terminates their association with the Devsinc.

9.6. Internet Usage

- Users must use the Devsinc Internet services appropriately, responsibly and ethically.

- The Internet access shall not be used in a way that violates the Devsinc policies, rules or administrative orders.
- Users shall only use the Devsinc Internet services for business related activities. The illegal or non-business use of such services is not permitted.
- Users shall not use the Devsinc Internet services for viewing or downloading inappropriate material (offensive, sexual images, jokes and comments, or any other comments that are reasonably expected to offend someone based on their physical or mental disability, age, religion, marital status, national origin).
- Access to websites containing the following type of content is prohibited and shall be blocked:
    - Adult / sexually explicit material;
    - Advertisements & pop-ups;
    - Gambling;
    - Hacking;
    - Illegal drugs & pharmaceuticals;
    - Peer to Peer file sharing;
    - Spam;
    - Phishing and fraud;
    - Spyware; and
    - Offensive content.
- The Devsinc's IT department shall block access to Internet websites and protocols that are deemed inappropriate for the Devsinc's corporate environment. If a site is incorrectly categorized, employees may request the site to be unblocked by contacting the IT Help Desk.
- Following the review of the request by the Information Technology Office, the site may be unblocked if it is deemed to be incorrectly categorized.
- Users with administrative rights shall not alter or attempt to alter their internet access settings and/or configurations.
- Users shall carefully read all security alerts presented by their Internet web browser. If the user is unable to understand or is uncertain about the security alerts, he/she should contact the Information technology Office prior to proceeding with web browsing.

9.7. Remote Access

- Any remote connection that is configured to access the Devsinc resources must adhere to the Devsinc's information security manual, standards & guidelines.
- All remote computer equipment and devices used for business activity, whether personal or the Devsinc-owned, must be compliant with the Devsinc's Information Security policy and related documentation.
- It is the responsibility of all the Devsinc Users with remote access privilege to ensure that their remote access connection remains as secure as possible and not to connect to other networks during business operations.

9.8. Password Usage

- Users are reminded that they are personally responsible for all events that occur under their logon accounts. Therefore, users are responsible for keeping their passwords confidential.
- No employee is to give, tell, share or hint at their password to another person, including the IT staff, administrators, superiors, other co-workers, friends and family members, under any circumstances. If someone demands your password, refer them to this directive or have them contact the IT.
- It is advisable not to use the "remember password" feature of applications such as internet explorer, email program or any other program.
- If possible, users should use different passwords to access different systems.
- If an employee either knows or suspects that his/her password has been compromised, it must be reported to the IT and the password should be changed immediately.
- Users shall not store passwords on the computer screen or under the computer or in any other accessible location.

9.9. Printer Usage

- Printers should not be used to print personal documents.
- Personal printers shall be considered in certain circumstances where confidentiality, remote location or other unusual circumstances warrant it.
- All printed copies shall be collected as soon as possible shall be disposed immediately if no longer required. Any unattended printed copies will be disposed of by facilities management.
- Avoid printing email messages. Instead use the folders and archiving functionality in the email application to organize and view messages.

9.10. Physical Security

- Employees must use only their own card to access the Devsinc premises. Sharing of cards is not permitted.
- Exit doors provided are for emergency use only. These shall not be used for regular access.
- Unacceptable Use
- Users shall not use the Devsinc - provided systems, services and facilities for illegal or unlawful purposes, including, but not limited to copyright infringement, obscenity, libel, slander, fraud, defamation, plagiarism, harassment, intimidation, forgery, impersonation, illegal gambling, soliciting for illegal pyramid schemes, and computer tampering (e.g. spreading computer viruses).
- The following activities are strictly prohibited, with no exceptions:
  - Using the Devsinc's information systems to actively engage in procuring or transmitting material that shall be deemed as obscene, offensive to the state and/or co-employees.
  - Making fraudulent offers of products, items, or services originating from the Devsinc's account.
  - Bypassing the security systems implemented to protect information systems.
  - Providing the Devsinc's Internal, Restricted or Confidential information including, personal information of the Devsinc's Employees, its financial information, strategic plans etc. to parties outside the Devsinc for personal gain.
  - Using anonymous, faked or forged identities on information systems.

9.11. Compliance and Monitoring

- Systems and services used/provided by the Devsinc are the property of the Devsinc. This gives the Devsinc the right to monitor all activities performed using these resources.
- Users shall maintain continued compliance with all the Devsinc's policies and related documentation while using the Devsinc's systems, facilities and/or services.
- If Devsinc discovers or has good reason to suspect activities that do not comply with applicable laws or policy, activity logs or records may be retrieved and used/presented as evidence for disciplinary action against the involved user.

9.12. Disclaimer

- Devsinc assumes no liability for direct and/ or indirect damages arising from the user's use of Devsinc's systems and/ or services.

9.13. Reporting Acceptable Usage Violations

- Violation of information security policy, these directives or procedures by another user, employee, contractor or third-party service provider should be reported to the IS department and/or the HR department.
