Annexure A: 7

Annexure B: 8

1. Overview:

Laptops are provided to Devsinc's employees to assist and facilitate official communications and research. They are provided for legitimate official use in the course of employment for assigned duties only.

2. Scope:

This policy applies to all laptops owned by Devsinc that need to be repaired or to be categorized as **"obsolete"** and **"dead"** by the IT department.

3. Purpose:

The purpose of this policy is to define the financial limits and procedures for repairs, establish clear allocation guidelines for post-repair, and set protocols for the classification and disposal of the laptops that are not under warranty or cannot be claimed by warranty and owned by Devsinc.

4. Policy Statement:

This policy establishes guidelines for repairing, allocating, and managing the laptops within the organization to ensure efficient utilization, protection and compliance with the industry best practices for the disposal or re-use of laptops.

5. Responsibilities:

5.1. IT department is responsible to categorizing the laptop as obsolete or dead on the basis of market value and will update the fixed asset register accordingly.

5.2. Procurement department holds the responsibility to assess market value of asset. [Ref: Disposal of Fixed Asset: DEV-DFA-001].

6. Classification of Laptops:

Type of Laptop	Obsolete	Dead
MacBook	A MacBook which has passed 7- years from the launch year **AND / OR** Software updates have been discontinued by the manufacturer. The IT department will examine the MacBook as per **Annexure A** to declare the MacBook as **"obsolete"**.	If a MacBook's repair cost exceeds the predefined limit (as explained in the repairing budget plan below), or if it is returned by the vendor with a note indicating it is beyond repair, such a MacBook will be classified as **"dead"**. The IT department is responsible for assessing and deciding on the **"dead"** status of laptops in case of severe damage, such as liquid spills or board damage, and when repetitive issues indicate a diminishing return on repair investments. The IT department will examine the MacBooks as per **Annexure A** to declare the MacBook as **"dead"**.

Windows/Linux Based Machine	The machines other than MacBooks which have passed 5- years from the launch year **AND / OR** Software updates have been discontinued by the manufacturer. The IT department will examine the Windows/Linux machine as per **Annexure B** to declare as **"obsolete"**. ***Note:*** *If a laptop that is less than five years old, experiencing persistent technical problems, such as consistently high CPU usage or frequent hanging, it would be declared as* ***"obsolete".*** *Because, it no longer meets the performance requirements necessary for the operational staff or connectify (VPN), due to its low efficiency and ongoing technical deficiency.* *Additionally, if a laptop has undergone multiple repairs, such as the replacement of hinges or various panels (A, B, D), it would be marked as* ***"obsolete"*** *due to high or multiple repair cost.* *This criterion applies regardless of whether the laptop is within the five-year age limit, as the condition of the machine is not up to the mark for use.* This policy ensures that our equipment remains reliable and efficient for the needs of our teams.	If Windows/Linux-based machines' repair cost exceeds the predefined limit (as explained in the repairing budget plan below), or if it is returned by the vendor with a note indicating it is beyond repair, such a machine will be classified as **"dead".** The IT department is responsible for assessing and deciding on the **"dead"** status of laptops in case of severe damage, such as liquid spills or board damage, and when repetitive issues indicate a diminishing return on repair investments. The IT department will examine the Windows/Linux machines as per **Annexure B** to declare them as **"dead"**.

7. Repairing Budget Plan:

For Laptops:

Laptop Manufacturing Year	Repairing Percentage*
1	30 %
2	
3	
4	20%
5	
6	10%
7	

* The repair percentage will be calculated based on the current market price of the laptops as per the list provided by procurement department.

Calculation Method:

If a laptop was launched in 2020, and as of 2024 (regardless of its purchase year), 4 years have passed, the repair percentage applied to it will be based on 4 years. For a laptop launched in 2015, 9 years have now passed, and the current expense for even a charger is Rs. 26,000/- as per the last purchase, with the battery costing around Rs. 13,000/-. Therefore, it has been decided not to further repair it.

8. Disposal of Laptops:

Obsolete	Dead
It can be used in operational departments on the need basis. For excess stock of laptops, the procurement/marketing department will be involved in leading the sales within the company. If there is still stock of MacBook, Windows, or Linux-based machines available after selling within the company, the procurement department will take the lead in selling/bartering with any vendor.	From the laptops marked as dead, 75% of the stock will be auctioned as per the [Ref: Disposal of Fixed Asset: DEV-DFA-001], while the remaining 25%, will be kept as **"spare"** for repairs of the existing inventory by the IT department. The stock that is kept in the store and not marked as **"spares"** by the IT department, will be the responsibility of the procurement department. If a laptop model which is not in use by any Devsinc employee, but is present in the spare stock, it will automatically fall into the sale/barter category.

The policy states that if two or more obsolete or dead laptops are present in the stock, the IT department will not fix or repair them to make one functional. However, if two or more dead laptops are present but are not obsolete, the IT department will fix or repair them to make one functional because it can be reused in the organization.

Note:

- IT Department will make sure that any of Devsinc's data or information is permanently removed from the laptops.
- Equipment containing storage media shall be verified to ensure it is free of sensitive information prior to disposal or re-use.
- Based on the assessment of the equipment by IT department, the department will coordinate the transfer of equipment with the Store Incharge of Administration.
- IT department will also label and pack IT assets properly and ensure that they are handed over to store Incharge for the storage.

9. Monitoring:

The policy requires regular reconciliation of repair expenses and laptop allocation records to ensure adherence to the set guidelines and financial limitations by the IT department and procurement department.

10. Continual Improvement:

This policy is enforced to all employees of the IT department. It will be reviewed annually or earlier if necessary.

Annexure A:

MacBook Testing Checklist

Sr#	Items	Description
1	Physical Condition	1) Inspect A, B, C, and D Panels.
2	Processor and Performance	2) Ensure the processor is either 2.2GHz to 2.9 GHz Core i7, upgraded or according to demand (Only for Intel-Chip). 3) Ensure the processor is Apple M-Chip, M Pro Chip, and M Max Chip, upgraded or according to demand (Only for M-Chip).
3	Memory and Storage	4) Confirm 16GB RAM or enhanced. 5) Verify 512GB SSD or enhanced.
4	Screen and Display	6) Perform proper screen testing with 4K ultra video playback. 7) Check LED panel light for white color only shade testing.
5	Keyboard and Input	8) Test every single key on the keyboard. 9) Verify touch bar and trackpad functionality. 10) Conduct hinge testing for smooth operation.
6	Sound and Video	11) Test speaker quality and functionality. 12) Conduct camera testing. 13) Mic testing.
7	Battery and Power	14) Perform load testing to ensure stable performance under stress at multiple Applications. 15) Check the battery's physical condition and capacity. 16) Check the condition and connectivity of the charger and cable.
8	Ports and Connectivity	17) Test the hands-free port, charger port, and all ports. 18) Ensure Wi-Fi connectivity.
9	Software and Security	19) Check for operating system issues especially remote management. 20) Verify the serial number from the back panel.
10	Repairs and History	21) Confirm if the motherboard is original or if it has been repaired.

Annexure B:

Windows/Linux-based Machines Testing Checklist

Sr#	Items	Description
1	Physical Condition	1) Inspect A, B, C, and D Panels.
2	Processor and Performance	2) Ensure the processor is either 2.2GHz to 2.9 GHz Core i5, upgraded or according to demand (Only for Intel-Chip).
3	Memory and Storage	3) Confirm 16GB RAM or enhanced. 4) Verify 256GB SSD or enhanced.
4	Screen and Display	5) Perform proper screen testing with 4K ultra video playback. 6) Check LED Panel Light for white color only (Shade testing).
5	Keyboard and Input	7) Test every single key on the keyboard. 8) Verify touch bar and trackpad functionality. 9) Conduct hinge testing for smooth operation.
6	Sound and Video	10) Test speaker quality and functionality. 11) Conduct camera testing. 12) Mic testing.
7	Battery and Power	13) Perform load testing to ensure stable performance under stress at multiple applications. 14) Check the battery's physical condition and capacity. 15) Check the condition and connectivity of the charger and cable.
8	Ports and Connectivity	16) Test the hands-free port, charger port, and all ports. 17) Ensure Wi-Fi connectivity.
9	Software and Security	18) Check for operating system issues especially remote management. 19) Verify the serial number from the back panel.
10	Repairs and History	20) Confirm if the motherboard is original or if it has been repaired.
